**Amendments to Claims:**

This listing of claims will replace all prior versions and listings of claims in the instant application:

**Listing of Claims:**

Claims 1-7 Canceled.

8. (Original) An interchangeable filament system, comprising:

a container;

an interface detachably engaged to said container, wherein said interface has a notch having predetermined dimensions for receiving a first filament apparatus and a second filament apparatus, said first filament apparatus having an opening corresponding to said predetermined dimensions and said second filament apparatus having an opening corresponding to said predetermined dimensions, wherein the perimeter of said opening of said second filament apparatus is not equal to the perimeter of said opening of said first filament apparatus.

9. (Original) The filament system according to claim 8, wherein said first filament apparatus further comprises:

a flange;

at least one projection assembly, wherein said projection assembly is attached to said flange; and

at least one engagement structure mounted on said projection assembly for detachably securing said first filament apparatus to said interface.

10. (Original) The filament system according to claim 9, wherein said second filament apparatus further comprises:

a flange;

at least one projection assembly, wherein said projection assembly is attached to said flange; and

at least one engagement structure mounted on said projection assembly for detachably securing said second fitment apparatus to said interface.

Claims 11-17 Canceled.

18. (Original) A method of providing an interchangeable fitment system, comprising the steps of:

providing a container;

providing an interface, wherein the interface has a notch having predetermined dimensions;

detachably securing the interface to the container;

providing a first fitment apparatus having an opening corresponding to the predetermined dimensions,

providing a second fitment apparatus having an opening corresponding to the predetermined dimensions, wherein the perimeter of the opening of the second fitment apparatus is not equal to the perimeter of the opening of the first fitment apparatus; and

interchangeably connecting the first fitment apparatus and the second fitment apparatus to the interface.

19. (Original) The method according to claim 18, wherein said providing a first fitment apparatus step further comprises the steps of:

providing a flange;

providing at least one projection assembly;

attaching the projection assembly to the flange; and

mounting at least one engagement structure on the projection assembly for detachably securing the first fitment apparatus to the interface.

20. (Original) The method according to claim 19, wherein said providing a second fitment apparatus step further comprises the steps of:

providing a flange;

providing at least one projection assembly;  
attaching the projection assembly to the flange; and  
mounting at least one engagement structure on the projection assembly for detachably securing  
the second fitment apparatus to the interface.
